Adolescence Risk And Resilience Against

Adolescence, Risk and Resilience: Against the Odds | Wiley.

Adolescence is often portrayed as an age of particular risk.

Adolescents are not only considered a risk to themselves, but also to the rest of society. As a society, we are nervous of them, and consider them vulnerable, yet the seeds of successful and independent adult life are laid down in adolescence, and they need all the help and support that they can get at a challenging time.

We examined associations between early childhood (first 3 years of life) risk and protective factors and resilience against adolescent substance use in a prospective sample of alcoholic and non-alcoholic families. We defined resilience as low or no substance use in the context of adversity (having a father with alcohol problems).

September 2017, Vol 48, No. 8. Print version: page 40

Maximizing children's resilience

Adaptation to adversity is a priority research topic due to its importance to mental health promotion and risk behaviour prevention in children and adolescents. The study of resilience, which can be broadly defined as the dynamic process through which positive outcomes are achieved in the context of adversity (Masten, 2001, Masten, 2014), can provide educators and governments with information about the resources that can be mobilised to promote positive outcomes in adverse environments ...
